Philadelphia July 27th 1827

Dear Doctor

With delight I acknowledge the receipt of your letter of the 19th inst which lately came to my hands

The parcel of dryed plants which you have had the goadness to forward to me arrived some time in March and just in time to accompany mine which had been detained all winter in consequence of the ice suddenly obstructing the navigation of the river at this place

I am glad you have received a collection of plants directly from Dr Steudel and will cheerfully ~~shall~~ prepare as many plants of this vicinity as possible to send to him. I have already dryed a considerable number and will continue drying until autumn, and besides, I have engaged my friends Dr Darlington and the Rev. L. D. de Schweinitz to assist me by preparing plants of their neighbourhood — Friend Muller in the west also promises to send me some. If you wish to send a parcel to Dr S. very soon I will frankly forward you those which I have prepared, if you should require them to make up your collection.

I have at this time a package of European plants

for you which I received in the spring and have been waiting for a safe opportunity to send them to you. — If you wish them forwarded immediately please to tell me to whose care I shall direct them in New York

I shall be very glad to accompany you in the pines of N. Jersey and unless some unforseen occurrence prevents I shall be ready to start at your call — Let me know your arrangements before you start and also what part of the pines you wish to explore

Yours very Respectfully

S. Fendley

Dr. J. Torrey
